About us

Diplomat Blades (Aust.) Pty. Ltd. is an Australian owned family business established in 1972. Located in the south eastern suburbs of Melbourne, we import and distribute industrial blades, razor blades, cutting knives, hand tools, carpet and flooring accessories, machine knives, measuring tapes, safety knives and the HexArmor range of PPE products throughout Australia and New Zealand.

With over 40 years of experience in the industry, we pride ourselves on providing the highest quality blades, knives, tools and safety products at the most competitive prices. Representing leading manufacturers from the USA, UK, Germany, Japan and South-East Asia, we are able to source

a vast and diverse range of products and access the latest innovations from around the world.

We also offer custom designed products tailored to suit customer requirements. Our products are available in both bulk trade packaging and convenient hang sell packaging for retail display.

We pride ourselves on prompt and accurate supply, combined with the highest level of customer service, and we would be delighted to have the opportunity to supply your requirements.

“Diplomat has all the safe cutting solutions, tools and protective gloves to keep people safe and productive at work, we aim to be a business partner not just a supplier”

Paul Klein – Diplomat director

The reasons why you should get more from us

100% Australia owned company

Made in Japan

Kklever
innovations

Kleever products help companies drastically reduce costs associated with injury claims and damaged merchandise. Kleever cutters are the safest choice as a Package Opener, Cardboard Cutter, and Box Cutter.

The company set a new standard for safe cutting tools and its innovative products are Safe, Versatile, and Easy to use. Their recessed blade design helps prevent accidental contact, reducing the opportunity for personal injury and lost productivity

Product:

Safety Cutters, Replacement Blades

Made in USA

HexArmor
the science of safety

HexArmor is the industry leader in innovative personal protective equipment (PPE) solutions offering the most effective personal protection in the world.

HexArmor exclusive advanced technology provides unmatched protection from cut, puncture, impact, needle abrasion resistance. HexArmor with SuperFabric™ products deliver the highest possible levels of protection, without sacrificing comfort and dexterity.

Hexarmor gloves help companies to reduce their hand and body injuries, keeping staff safe, and allowing them to do their job, whatever that job may be.

Product:

Maintenance Gloves, Waste Management Gloves, Mining Gloves, Heavy Duty Gloves, Hospitality Gloves, Needlestick Resistance Gloves, Arm & Body Production

Made in USA

slice™

Slice™ cutting tool is a passionate celebration of bold design mixed with extraordinary function and forward-thinking safety features. Slice has also invented ceramic blades which have more hardness and durability, and have many benefits compared to traditional metal blades

Product:

Safety Knives, Safety Cutter, Ceramic Knives, Box Cutter, Ceramic Blades

Made in USA

premax®

Premax has been producing high quality scissors and shears since 1700, Their professional shears and seamstress scissors combine comfort and precision.

Past experience, a continuous search for the best materials and high-tech machinery- specifically projected and made by local factories for the manufacturing of cutting instruments- all allow Premax to offer a wide range of high quality products guaranteed by controls carried out during the production process and a final text made by highly-skilled Premax personnel.

Product:

Professional Scissors and Shears

Made in Italy

Mongrel is an Australian manufacturer of professional knee pads that provides the highest level of mobility, comfort and superior knee protection. If you are on your working on your knees, you want the best comfort and protection of any Australian designed knee pads.

A man with a beard, wearing a light blue button-down shirt and dark work gloves, is shown in a factory environment. He is leaning forward, holding a large, curved roll of brown cardboard. The background features blue metal railings and industrial machinery. The text "Roll Slitters" is overlaid in white on the right side of the image. A shipping label with a barcode is visible at the bottom right corner of the cardboard roll.

Cutting Mats

Self-healing Cutting Mats

Self-healing Technology

Self-healing cutting mats with durable, non-slip surface for repetitive cutting without damaging your work surface or harming the knife edge. The cutting mats are from a unique composite vinyl material, designed for both rotary blades and straight utility blades. The cutting mats provide a long-lasting, non-glare surface that can be cut and slashed constantly without showing marks or cutting lines.

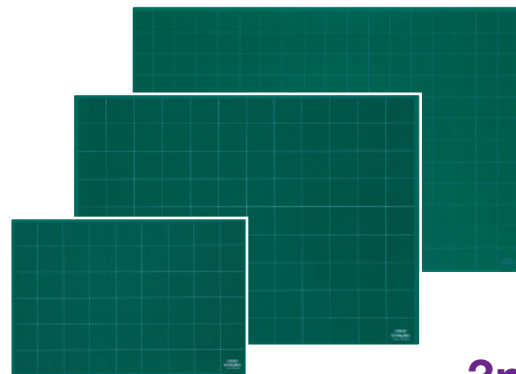

NCM-S

Rotary Cutting Mats - 5cm Grid Line

- Self-healing professional quality cutting mats, designed for use with OLFA rotary cutters large and small snap cutters, art and graphic knives

REUSABLE SHOE COVER

Yuleys

YULEYS

Leave behind only a good impression. **Not a muddy boot print!**

INCREASE SAFETY BY PREVENTING SLIPS

Fast, Cost Effective, Clean.

These industrial-grad work boot covers are perfect fit for in-home service workers, industrial workers entering sanitary work areas, food prep and agriculture, and people working in clean rooms and sterile environments. Save yourself the time of taking off your boots, or the cost and inconvenience of going through boxes of disposable booties, and take a step in the right direction.

Washable & durable

Easy to attach

No mess, no marks

SAFETY GRIP® FOOTWEAR

WITH THE SOLE THAT CHANGED THE INDUSTRY

Safe
Slip Resistance
Comfort

Extra ankle support with padded collar

High quality leather and premium components

Composite toe cap

Rubber outsole exceeds SRC under AS/NZS 2210.3:2009

DRI-LEX Moisture Management

Airport friendly Non metal

Non-metallic spike resistant midsole (lace-up range)

DESIGNED FOR MAXIMUM SAFETY PERFORMANCE AND COMFORT

The Sole

The sole is made of different rubber compounds that together give the user tremendous grip on any surface.

The pattern allows for many connections to the ground and allows liquids to channel away from the boot. These two features make this boot unique in the Australian market.

The Lining

The lining we use is Dri-lex® Sweat Control Fibre. This material has been tried and tested for years to guarantee maximum breathability, moisture management and comfort. The strong liner is built directly into the boot and breathes to eliminate the potential for sweat build up.

The Material

Our boots are made with high quality leather and premium components to provide long last wear, strong cut and impact protection to your feet. They are comfortable, durable, breathable and water resistant.

Suitable For:
Food Industry
Warehousing
Construction
Logistics
Mining

Safety Accessories - Safety Grip Footwear

Our **MISSION** is to help protect you from slip and fall accidents by providing the most comfortable and maximum slip resistant footwear available anywhere.

SAFETY GRIP® TECHNOLOGY

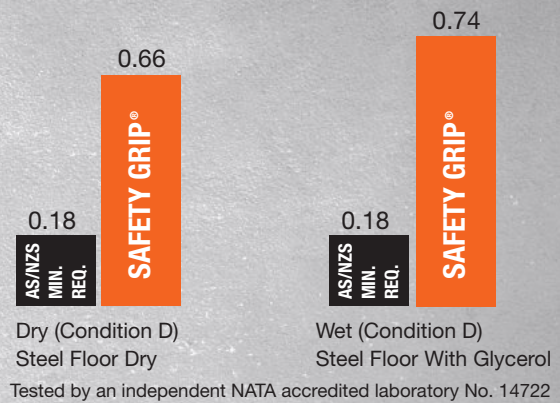

Safety Grip® outsole is made from an exclusive rubber compound that grips the microscopic roughness of the floor surface.

Our unique micro-channel tread pattern channels liquids away from the bottom of the sole. This combination results in unbelievable traction on all types of wet and greasy floor surfaces.

SAFETY GRIP® IS RIGOROUSLY TESTED & FULLY CERTIFIED:

- Certified to AS/NZS 2210.3:2009
- ISO 20345:2004 PPE Safety Footwear
- Exceeds SRA & SRB Slip-Resistant Requirements
- Certified SRC Resistant (Wet + Dry)
- Removable comfort insole with PU and TPU stabilizer
- Injection PU/rubber slip-resistant outsole

SLIP RESISTANCE TEST 2210.3:2009

DID YOU KNOW....

Slips and Falls account for **more injury and workers' compensation costs** than any other accident type¹?

And the median number of **work days lost due to slip, trip and fall accidents** is between 7 and 14 days²?

Slip and Fall total cost amounted to a staggering \$8.7 Billion annually³, that's 21% of all injuries in Australia. **\$78,000 is the average cost per case.**

That's why choosing the right slip resistant footwear is so important for you and your employees

1,3. Safe Work Australia 2012 Report - The cost of work related injury and illness for Australian employer, workers and the community 2. Days lost vary depending on the severity of the incident - Safe Work Australia 2012

FREEZER MASTER®

Workwear For Extremely Cold Environments

FREEZER MASTER®

is designed to provide complete comfort and protection in very cold and sub zero working environments.

This freezer wear has a tough water resistant outer shell fabric and super warm polyester fibrefill insulation to keep your body comfortably warm in extremely cold and wet conditions.

Exclusive Features:

- Super Warm Polyester fibre fill insulation
- Premium, breathable and waterproof fabric
- Warmth retaining fleece collar and stretch comfort cuffs to lock in body warmth
- Roomy hand warming and utility pockets.
- Additional upper chest and arm pockets with pen holder
- Hood lined with comfortable boa, finished with knitted wind seal
- Premium reflective tape used on our garments
- The jacket is designed with a 3 point adjustment, detachable hood
- Premium materials for long lasting use
- Double seal protection (Zip+Velcro)
- Fully washable

Nothing performs better in cold environments than **FREEZER MASTER®**

- The Master of Freezing cold environments -

Safety Accessories - Freezer Master Workwear

When maximum thermal protection is required, **FREEZER MASTER®** workwear will keep you warm. Allowing you to perform at your best even under the coldest conditions.

Detachable hood with extra high collar

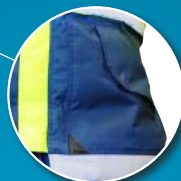

Double seal protection (Zip+Velcro)

Reflective tapes for night condition

Knitted cuffs to lock in body warmth

Two patch pockets with hand warmers

Expandable waist for movement

Reinforced knee

Elastic cuff inner pant

Full length zip with Velcro

Technical Standards:

- Outer fabric is water proof - AS 2001.2.17.
- Outer fabric is breathable - ISO 11092.
- Outer fabric water repellency rating of 80 min. AS 2001.1.16
- The reflective tape on the jacket meets the Day / Night standards under AS 4602.
- Colour fastness to AS 2001.
- Fully washable

Applications:

- Cold storage warehouses
- Cold outdoor environments
- Tradesmen
- Wharves
- Freezers, freezer vans
- Food Manufacturing
- Shipping

DIP1042

Freezer Master Workwear Jacket

FREEZER MASTER

Available Size: S-4XL

Super Warm Polyester fibre fill insulation. Premium, breathable and waterproof fabric. Knitted nylon collar and cuffs to lock in body warmth. Premium reflective tape used on our garments. Double seal protection (Zip+Velcro). Jacket is fully washable and comes with a detachable hood.

30,000 Australians die from Sudden Cardiac Arrest each year

Data from the Australian Heart Foundation

Unfortunately, Sudden Cardiac Arrest (SCA), is the leading cause of death in Australia. With SCA, promptness of care can mean the difference between life and death. As proof of this point, data shows that implementation of a proper Automated External Defibrillator (AED) program can increase the typical SCA survival rate from just 5% to a dramatically improved survival rate of 74%.

Defibrillators save lives and can be the difference between life and death.

- On average, ambulance response time is 6-12 minutes.
- Survival rates drop 10% as each minute passes without defibrillation.
- When Sudden Cardiac Arrest occurs, defibrillation should occur within 3-5 minutes, or sooner.
- An Automated External Defibrillator, together with CPR, is the ONLY way to restart the heart during Sudden Cardiac Arrest.

Simple to use. Simple to manage. Simple to transfer care to professionals.
Our Defibrillators are effective in saving the life of a victim of sudden cardiac arrest.

The Most Effective Personal Protection In The World

HexArmor
WITH SuperFabric®

Exclusive Advanced Technologies

Cut Resistance

- Shielding effect keeps sharp hazards (metal, blades, glass) from slipping between fibers and causing injury

Puncture Resistance

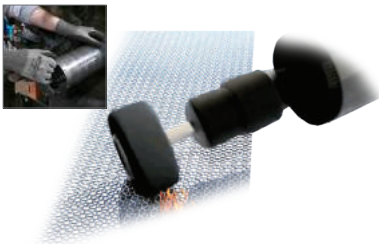

- SuperFabric[®] guard plates act as a shield from punctures, deflecting and blocking hazards

Needlestick Resistance

- Layered guard plates arrest, trap, and block needles and other hazards. Products tested using ASTM-F2878

Abrasion Resistance

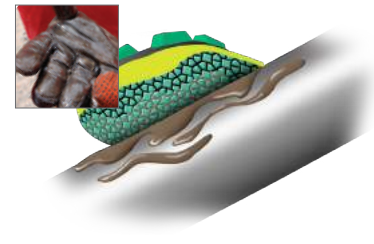

- Incredibly high abrasion resistance, outlasting competitors and providing protection longer into product life

Impact Resistance

- Guard design has the ability to dampen blunt force to the hand better than any other product on the market

Dry Grip/Fluid Grip

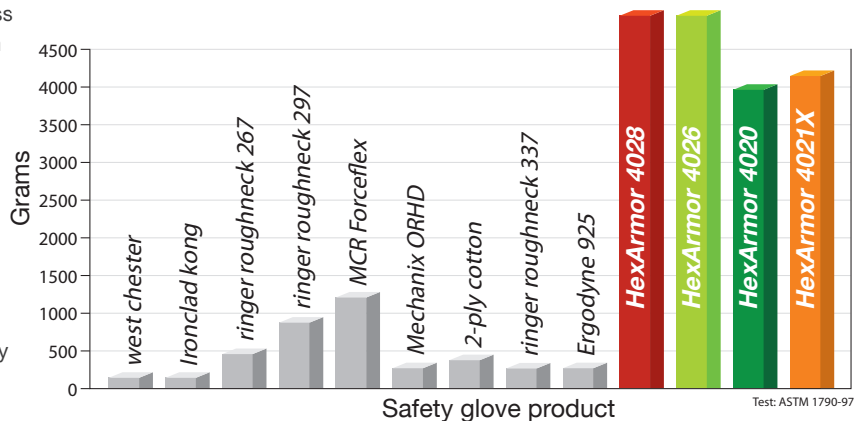

- HexArmor[®] developed a complete line of gloves to meet the technical challenges for maintaining grip in oil and gas applications

Competitive fabrics don't always cut it where protection is needed most.

Cut Resistance Comparison

SuperFabric[®] technology, is a finishing process that takes ordinary fabrics and transforms them into high performance products collectively known as SuperFabric[®] brand materials. These new protective fabrics can be engineered for optimum resistance to abrasions, lacerations, punctures, stains, and more, while remaining highly flexible. SuperFabric[®] brand material simultaneously incorporates a variety of protective fabric functions that no other known fabric can simulate, including industry-leading cut-puncture-and needle-resistance. Exclusively on HexArmor protection products.

*Testing done through all materials on palm, including added patches

Test: ASTM 1790-97

HexArmor Product Range

UNDERSTANDING THE PROTECTION ZONE DIAGRAM

Impact Protection
 SuperFabric® Protection Zone

4 Abrasion resistance

Ranges from 0–4 and is based on the number of cycles required to abrade through a sample glove using a specially designed machine for measuring the abrasion of textiles.

5 Cut resistance

Ranges from 0–5 and is based on the cut resistance of a rotating circular blade with mass applied to it.

2 Tear resistance

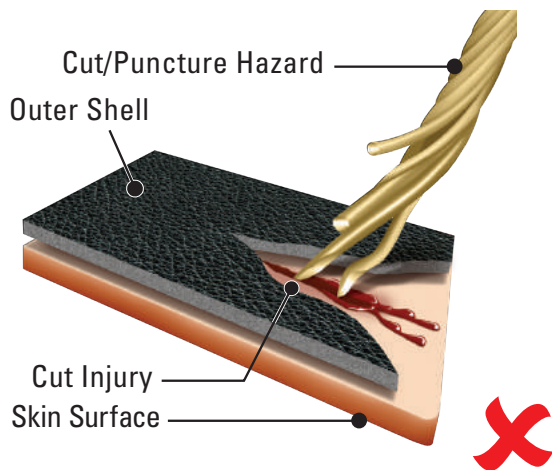

Ranges from 0–4 and is the force in Newtons needed to tear a previously cut specimen.

1 Puncture resistance

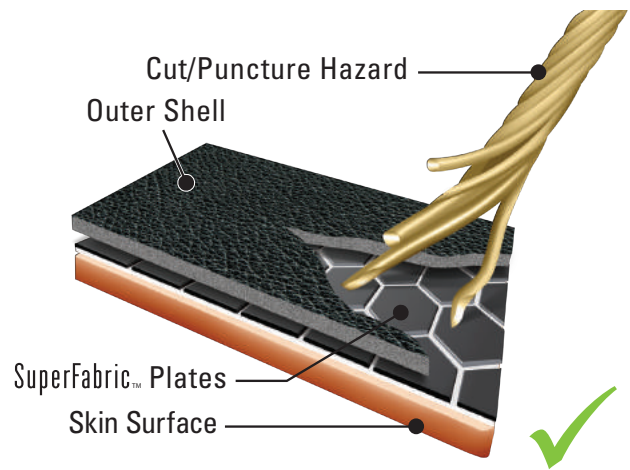

Ranges from 0–4 and is the force in Newtons needed to puncture the PPE material using a specially designed stylus.

MAXIMUM CUT PROTECTION WITH DEXTERITY AND GRIP

Standard Working Gloves

HexArmor Safety Gloves

Standard Working Gloves often lacks the puncture protection to stop lacerations.

Preventing Lacerations And Puncture Wounds

Many lacerations start out as a puncture. A sharp corner, burr, baling wire, or other protruding hazard can penetrate the glove and scrape or cut skin. With synthetic leather or cotton gloves, the hazard will poke through the surface of the glove and then tear laterally to create a laceration. While a glove may say it has “cut-resistance” often lacks the puncture protection to stop lacerations.

HexArmor with SuperFabric® offers maximum cut protection that prevents lacerations

THE PERFECT UNION OF PERFORMANCE AND COMFORT

General Industrial 9000 Series - HEX-9010

PROTECTION ZONE

■ SuperFabric® Protection Zone
■ Coretek® Performance Fiber

Exceeds Level 5
 Cut Resistance **4544**

SIZES: S - XXL

Features:

- Innovative industrial puncture protection on enhanced areas from wires, metal, wood, and glass
- Cut-resistant HPPE shell with flat nitrile palm coating for great oily on dry grip
- Launderable

Product Uses:

- General work
- Small parts handling
- Wires, metal, wood, glass

SIZES: S - XXL

Features:

- Comfortable grain cow leather that will outlast your typical leather driver's gloves
- Exceeds ISEA/CE Level 5 (full protection coverage)
- May be dry-cleaned for repeated use

Product Uses:

- General work
- Razorwire/barbed wire
- Wires, metal, wood, glass

3 Layers with Super-Fabric®

NEEDLESTICK INJURIES - WHAT IS THE RISK?

Although there are not exact numbers on how many work-related needlesticks occur each year across the US, estimates indicate that **600,000 to 800,000** injuries occur annually, about half of which go unreported. Of those, a recent CDC study estimates that an average of 385,000 needlestick injuries occur in hospital settings. This means roughly half of all needlesticks occur outside of hospitals where the ramifications can be more severe.

The Cost of Needlestick Injuries

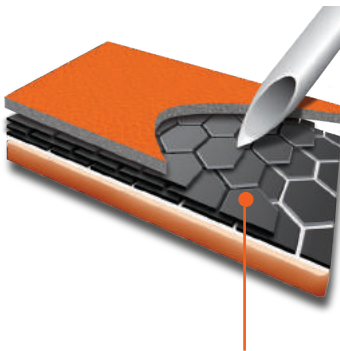

The precise cost of needlestick injuries is difficult to quantify. According to the American Hospital Association, one case of serious infection by blood borne pathogens can add up to **\$1 million or more** in expenses for testing, lost work time and disability payments. Even when no infection occurs, the cost to organizations is estimated to be more than **\$3,000 per injury for testing**, counseling and time off work.

HexArmor and New ASTM F2878 Testing

HexArmor has long understood these shortcomings and has been testing using a modified ASTM 1342 test using 25 gauge hypodermic needles. With the new ASTM F2878 test we are able to now standardize testing based on international standards.

The Results

We tested our needlestick and puncture resistant gloves, as well as competitive gloves, using the ASTM F2878 methodology producing the following results:

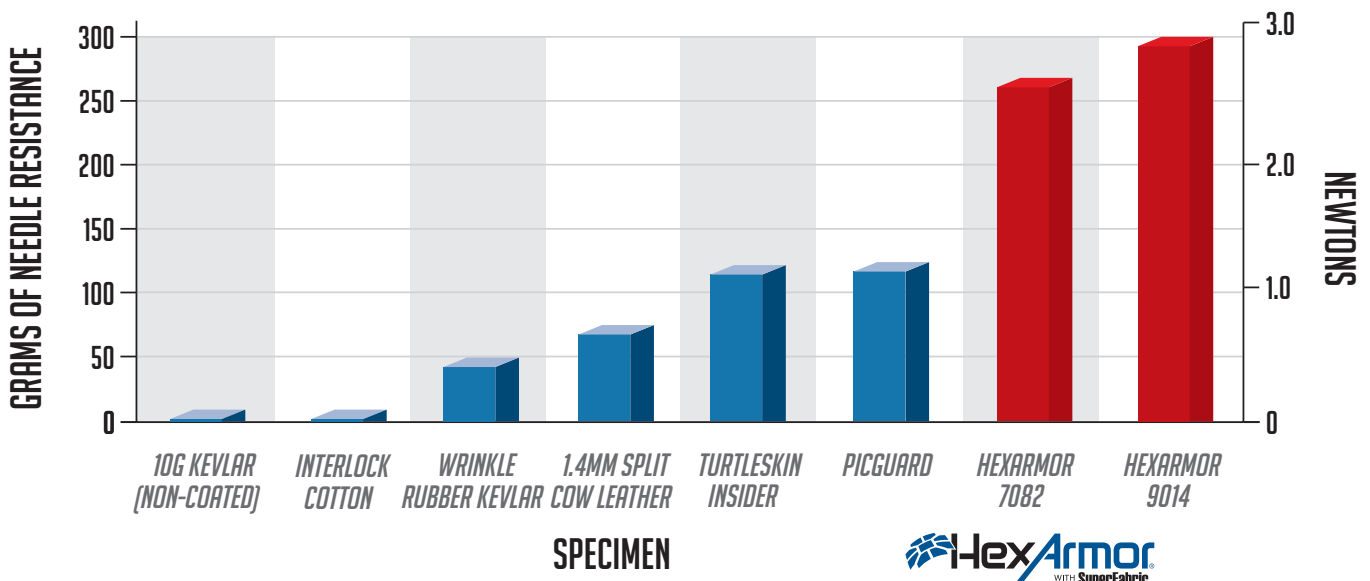

SuperFabric® guardplates block and deflect needle hazards, or trap and arrest them in the small gaps between guardplates. Multiple aligned layers of fabric provide extra resistance against needle hazards.

Our needle-resistant gloves and arm guards aren't just lab tested, we test them with actual 25 gauge needles to give you maximum protection and peace of mind.

HexArmor needle resistant products work by layering SuperFabric® materials over each other.

*The Newton is the Standard International unit of force. One Newton is the force required to cause a mass of one kilogram to accelerate at a rate of one meter per second squared in the absence of other force-producing effects. We have converted Newton's to grams.

**Needlestick
Sharpsmaster ii™ - HEX-9014**

PROTECTION ZONE

3 Layers SuperFabric® Protection

Exceeds Level 5 CE
Cut Resistance **4544**

SIZES: S - XL

Features:

- Tested using actual 0.25 gauge needles Highest level of cut-resistance, exceeds CE level 5
- Single-glove needle solution with incredible dexterity and comfort.

Product Uses:

- Waste / recycle sorting
- Hospital waste handling
- Laundry and linen
- Municipality work
- Wastewater / sewage treatment

**Needlestick
NSR - HEX-4041**

PROTECTION ZONE

3 Layers SuperFabric® Protection

Exceeds Level 5 CE
Cut Resistance **4522**

SIZES: S-XXL

Features:

- Tested using actual 0.25 gauge needles
- Highest needlestick-resistance
- Specialized silicon gripping surface on palm
- Launderable

Product Uses:

- Waste / recycle sorting
- Hospital waste handling
- Laundry and linen
- Municipality work
- Wastewater / sewage treatment

**Needlestick
Sharpsmaster HV™ - HEX-7082**

PROTECTION ZONE

PROTECTION ZONE

2 Layers SuperFabric® Protection

Exceeds Level 5 CE
Cut Resistance **4512**

SIZES: S-3XL

Features:

- Won't fall down like knit sleeves, lightweight and cooler than knit or leather alternatives
- Lasts 13 times longer than competitive sleeves
- Spandex wrist insert with thumb hole, snap fasteners

Product Uses:

- Waste / recycle sorting
- Hospital waste handling
- Laundry and linen
- Municipality work
- Wastewater / sewage treatment

HEXARMOR MINING SAFETY GLOVES:

CUT RESISTANT

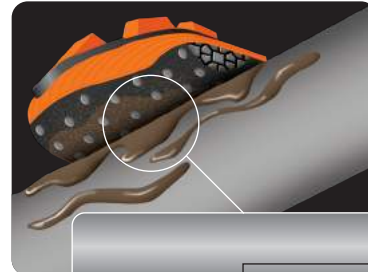

HexArmor prevents cut injury with SuperFabric™

The grip you need to work efficiently, effectively and safely

SLIP RESISTANT

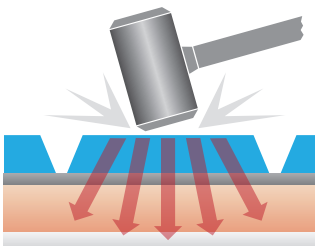

MUD GRIP™ 4021X
Surface wicks away lubricant, leaving particles that create friction and improve grip on metal tools.

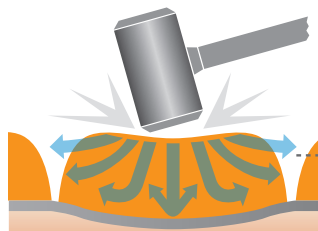

IMPACT RESISTANT

Standard Competitive Impact Protection

HexArmor Impact Protection

In the oil and gas industry, maintaining grip is a frequent challenge because of the constant presence of lubricating fluids, friction reducers, grease, oil-based muds and honey oils. When tools and pipes are covered with fluids, it can cause surfaces to become slick. This can lead to hand fatigue, strains and sprains from the increased effort required to maintain grip. Eventually, poor grip can lead to lower productivity and increased potential for injury and accidents.

Because different applications have different grip challenges, HexArmor® developed a complete line of gloves to meet the technical challenges for maintaining grip in oil and gas applications.

Mining Rig Lizard® TP-X+® Plam HEX-2025

Features:

- Protects against forceful blows to the back hand
- Additional IR-X guard between thumb and index finger
- Unique stitching pattern and Cut Level 4 Superfaic
- Launderable

Protective Knee Pads

All Blue Mongrel Knee Pads have been tested by AWTA to Australian Standards for:

- Abrasion Resistance AS 2001.2.28
- Heat Resistance AS 1441.7
- Heat Resistance DEF(AUST) 5037 A26
- Thickness Loss AS/NZS 2111.2
- There have also been successful tests for resistance to Acid, Oil and Alkaline.

The unique Stabilizer insert is designed to not only provide a more comfortable support for your knee but to limit the knee pad moving out of position when being worn. Due to the hi-tech material used and the unique construction it outperforms and outlasts any gel knee pad on the market.

Protective Knee Pads

KNEESOFT

Soft Protective Knee Pads

Diplomat
...the cutting edge

Speed Trimmer

Speed Trimmer

...even more efficient

4 Times Faster

Flooring Tools

Traditional Quartermoon Knife

Quarter Moon Knife

This posture puts a load on his back and knees. Despite all his efforts, the results are poor, the tool is a two-piece one, work is laborious.

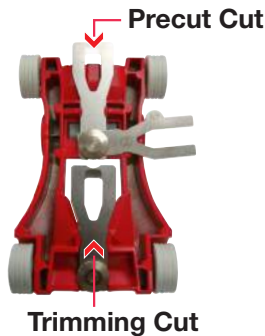

MOZART
Speed Trimmer

MOZART Speed Trimmer

No strain on knees or back, neat results and 4 times faster. No wonder this guy is smiling..

Single Pass Revolutionary Design

For large scale jobs, it would be ideal if the precut and trimming cut could take place in a single pass (combined cut) and in an upright position (ergonomic, feed). And that is exactly what the SpeedTrimmer does!

The cutting principle, blades and spacer claw are identical to the trimming knife. However the two blades are positioned exactly one behind the other in a trolley which is connected to a telescopic handle by a universal joint. To trim a seam, the trolley is positioned at the end of a seam, gentle pressure is exerted through the telescopic handle and the blades moves forwards, where the seam guides the blades almost automatically. The spacer claw under the pre-cutting blade is pivotable (final trimming cut right to the edge) For special applications, the second blade can be removed.

Flooring Tool - Hot Air Welding Gun & Accessories

LEISTER

Hot Air Tool TRIAC ST

Swiss
Made
Quality

Easy operation
Ergonomic handling

Always keeps a cool head

A real lightweight

C70 ST
Hot Air Welding Gun
Triac ST

TRIAC ST – Design meets experience

The new TRIAC ST from Leister is primarily used for welding and processing plastic. During its development, a deliberate choice was made to do without extra technical features. Instead it is distinguished by handiness, reliability and versatility, like its predecessor the TRIAC S. A prominent feature here is the two-component handle, which is not only attractive visually but also gives the user perfect grip.

The low weight of less than 1 kg/2.18 lbs ensures a perfect weight balance. The innovative motor and turbine design, combined with the heating element familiar from the TRIAC AT, enhance the value even more. Also new are two air filters that can easily be removed and cleaned. More than 80 nozzles fit onto the TRIAC ST – also compatible with the TRIAC AT and TRIAC S – making all conceivable applications possible, both indoors and outdoors.

Floor welding

- Overlap welding
- Draw welding
- Stitching

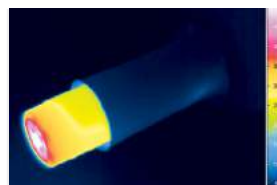

Heat applications

- Heat forming
- Activating
- Drying
- Removing paint, varnish and glue Shrinking

Always keeps a cool head

There is an actively cooled protective tube for greater work safety.

TRIAC ST – *The New S*

- 100% Swiss made quality
- 60 years of expertise in making hot-air tools – brought together in the new TRIAC ST
- The sturdy, professional hot-air tool that weighs less than 1 kg/2.18 lbs
- Functional design: two-component handle grip and optimum center of gravity ensure ergonomic working
- Quick clean air filters
- Automatic carbon stop (collector protection) and heating element protection
- Always keeps a cool head, there is an actively cooled protective tube for greater work safety.

Professional Scissors

Scissors

History, Passion and Quality are the secret of Premax success.

Our history has become our future.

Premax have not forgotten their traditions and the value of their products. They are driven by pride stemming from over 300 years of history and continue to supply every year, with the same care as in the past, implements used by millions of persons around the world.

Passion

Passion, creativity, dedication to work, respect for tradition and commitment to research are the ingredients of a recipe that cleverly mixes history and modernity to offer state-of-the-art technology, materials and design.

A guarantee of quality

Vast experience, a continuous search for the best materials and high-tech machinery- specifically projected and made by local factories for the manufacturing of cutting instruments- all allow Premax to offer a wide range of high quality products guaranteed by controls carried out during the production process and a final text made by highly-skilled Premax personnel.

D69170712

Dressmaking Shears

- Size: 19cm - 7.5" • Blades: Straight • Material: Stainless Steel
- Finish: Nylon Handles • Made in: Italy

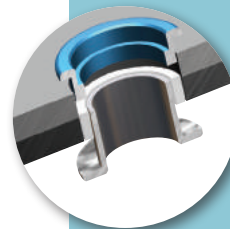

CODE	PACK DESCRIPTION	BOX QTY
D69170712	Each Dressmaking Scissor 7.5"	6
D69170834	Each Dressmaking Scissor 8.75"	6

After using the scissors for some time the screw unties, deteriorating the cutting efficiency and precision. The Ring Lock System developed by Premax® resolves the problem and keeps a constant blade setting.

The RingLock® System developed by Premax® is made of stainless steel bearing, an aluminium bearing and a Teflon ring assembled with a special high precision machine used in the watch industry. This allows a precise setting of the blades, eliminates the blade "twist" and guarantees a uniform quality of the production lot. The Ring Lock System improves the movement of the blade which, rotating around the Teflon ring - auto Lubricating and non-deforming material - keeps the blades set stable and guaranteed forever.

The Scissor Without a Screw

This is the key to a smoother, more precise cut and a longer edge's life.

A first ever scissor without a screw which eliminates the problem of screw loosening

RingLock® is made of stainless steel bearing, an aluminium bearing and a Teflon ring.

Kitchen Knives

Superb Quality Kitchen Knives

The ERGOFORGE collection is a truly unique creation, as it combines blades, made using the classical traditional system of forging with a drop hammer on incandescent bars of special steel, with ergonomic handles based on special research in the field. Used throughout the Butchery and Hospitality industry in Italy they have long been recognized as one of the best in the world and are a knife that you can use with confidence whether at home or in the workplace.

EZ Moves Furniture Sliders

0104

EZ Moves Furniture Slides For Carpet

One set of **EZ Moves Pro Furniture Slides™** allows one person to easily move heavy furniture and more! Simply tilt the object being moved, place a slide under each corner then push or pull the object with ease. Furniture is gripped by the 1/2" thick heavy duty foam. The ultra smooth base has a built in dual spring action to apply upward pressure keeping the pad in place during movement. Remove when finished.

Size: 11 1/2" x 6 3/4"

0904

EZ Moves Furniture Slides For Hard Floors

One set of **EZ Moves Pro Furniture Slides™** allows one person to easily move heavy furniture while protecting hard surface floors. Simply tilt the object being moved, place a slide under each corner then push or pull the object with ease. Furniture is gripped by the 1/2" thick heavy duty foam.

Size 8" x 5"

0502

EZ Moves 4FT Pull Slides For Carpet

9mm Snap/Non Segmented Blades

THE SUPERIOR QUALITY SNAP BLADES

The superior quality of OLFA blades is the result of a multi-step production process. Only the finest quality tool steel is selected for use. For all OLFA blades, we adjust hardness, sharpening angles, tapered dimensions, the coarseness of whetstone, the speed of grinding, etc. for every type, and ensure the blade has the best balance of high sharpness and longest blade life according to a usage.

Endurium Blades

Endurium™ Ceramic Solid zirconia ceramic		Use: preferably on slitter/rewinders, for converting extremely abrasive film and/or high speed operation		
Endurium™ Carbide Solid tungsten carbide		Use: on slitter/rewinders, and in-line with cast and blown film extrusion lines. Often: substitute for Ceramic because of better fracture toughness		
Endurium™ Coated HSS tool steel, ceramic-coated		Moderate cost combined with excellent performance. Suitable for the full range of film, except "extremely abrasive film", on slitters/rewinders and extrusion lines.		
Endurium™ Standard HSS tool steel, not coated		Typical Use: blade contamination (e.g. by deposits of adhesive or pigments), as opposed to cutter edge wear, requiring frequent blade replacement		
				
Slotted	3-Hole	Injector	Solid Injector	Rotary Blade
19 x 57 mm	22 x 43 mm	8 x 38 mm	8 x 38 mm	∅18, 28, 45, 60 75 mm

ENDURIUM™ CERAMIC

By far the best performance of any slitting blade with excellent life expectancy, insignificant coefficient of friction and hence superior slit quality. Furthermore, we only use HIP-treated ceramic (hot isostatic pressed) so our blades offer much improved hardness and fracture resistance when compared to cheaper ceramic blades. Key ratios compared to Tin-coated carbon steel blades: life expectancy 25-1, price/blade also approx. 25-1. Frequent of blade replacement drops by a factor of 25, resulting in reduced handling, down time and scrap production. Chemically inert, i.e. does not corrode, which makes it ideal for clean room use. Has lowest coefficient of friction (COF) of all industrial blades giving a cleaner slit edge and minimal heat generation.

881.040M2 ENDURIUM™

Slotted Blade - Square Corner

 Ceramic Coated Edge

- Material: M2 steel - High speed M2 steel
- Coating: Ceramic
- Dimensions: 57 x 19 x 0.38 mm
- Made: USA

881.040M2	Box 100	10

ENDURIUM™ COATED

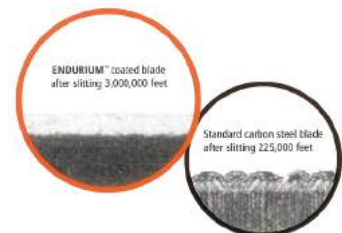

Industrial blades, produced from CrW (chromium tungsten) alloy, seriously outperform any other 'steel' blade on the market. This translates to a 25% cost advantage but more importantly the frequency of blade replacement drops by a factor of 4. Thus, less money spent on blades, less machine down time and less scrap produced offers a supreme saving all round. Furthermore, the flexibility of the alloy substrate with its fine ceramic coating gives maximum fracture resistant even at 62 Rc hardness.

Fewer blade change for:

- Lower long-term costs
- Improved safety
- Fewer re-orders

Longer lasting sharpness for:

- Cleaner cuts
- Reduced web and trim tears
- Fewer thickened edges

ENDURIUM™ blades are engineered to outlast and outperform standard steel blades... You can see the difference.

795mm x 20mm x 1mm

- Made in the USA
- Premium quality stainless steel
- Keen bevels and special finishes ensure finer cuts for longer periods
- Less blade changes, increases productivity

Machine Manufacture Application Guide

Diplomat is a predominant supplier of meat skinning blades in Australia. We supply skinning blades for all machines: **Cretel, Grasselli, Maja, Townsend, Varlet** and **Weber**. While many meat skinning blades in the past were made of High Carbon Steel, we find today that our Premium **Personna** Stainless steel is normally the best choice for our customers.

What makes a good meat skinning blade? As mentioned above, material selection is critical but also good consistent heat treating is a must. Personna cryogenically harden our skinning blades to ensure a consistent metallurgical structure throughout the blade. Lastly, a keen bevel makes a real difference in the performance of meat skinning blades. We polish our final angles to a very fine RMS finish, to reduce loading of cut material as well as allow the blade to pass better through the meat. Additionally, this fine finish reduces the amounts of microscopic nicks in the cutting edge, offering a finer cut for a longer period of time.

Packaging: Our meat skinning blades are packed 4 per sleeve in a protective plastic package although we can provide bulked packed blades at a slight savings. However, these blades are fine cutting instruments and care should always be taken to avoid any damage to the blades in transport or storage.

Custom Sizes: The sizes of meat skinning blades we usually produce and stock are as specified by the OEMs but we can make custom sizes as needed. For more information about the right blade for your machine and application, please contact our team.

Professional end users choose Personna when the cost of failure is high, and when performance matters.

Personna poultry and Food Processing blades are precision ground, creating the sharpest blades available in the market today. We also offer proven edge geometry for all processing applications and environments. Personna branded blades are offered in the most popular sizes to fit most brands of skinning equipment. Sizes range from 77mm to 1,000mm in either .7mm or 1.0mm thicknesses. Personna blades also offer a full cryogenic temper at -300 degrees for extra toughness. When productivity and quality matter, choose Personna.

Selecting the perfect blade for your application can make your task easier and safer

Utility Blade

- Engineered for general-purpose cutting
- Precision-honed edge for consistent and extended cutting life
- Suitable for most sheet materials

Concave Blade

- Keen edge for clean, true cuts in vinyl or linoleum floor covering, roofing and similar materials
- Fits most standard utility knives

Rounded Corner Safety Blade

- Rounded blade tips help protect against accidental cuts
- Engineered for general-purpose cutting
- Precision-honed edge for consistent and extended cutting life

Hook Blade

- Allows you to quickly and easily hook the blade over the end of the sheet you wish to cut, then draw back, cutting only that layer of sheet material.
- Ideal for cutting floor coverings and plastic sheeting
